Sportsbook Migration Guide

Our Sportsbook feeds are migrated to use new version of Kambi feeds. Few of the old feeds will be deprecated or merged to different API soon. Our Sportsbook migration guide provides a detailed description on the migrated APIs to help you migrate to new version.

CONTENTS

Migration Guide

This page describes the major differences in new version of sportsbook compared to old one. Endpoints which haven't been deprecated are to be found at /sportsbookv2/. Here are some of the endpoints which can now be accessed from /sportsbookv2/:

- **/sportsbookv2/groups.{responseformat}**
  Hierarchy of event groups starting from the root node.
- **/sportsbookv2/groups/{groupId}.{responseformat}**
  Hierarchy of event groups starting from group id specified as request parameter.
- **/sportsbookv2/event/group/{groupId}.{responseformat}**
  List of all events with at least one open bet offer from the specified group and its subgroups.
- And many other...

Following resources have been removed, changed or merged:

- **/sportsbook/betoffer/live/group/{id}.{responseformat}**
  Use /sportsbookv2/betoffer/group/{groupid}.{responseformat} instead, now you can use *excludeLive* and *excludePrematch* query parameters to get only prematch or live bet offers respectively. Also set *onlyMain=true* to get just the main bet offers. The default behavior of this resource is to return all bet offers including main, live and prematch.

- **/sportsbook/betoffer/live/event/{eventid}.{responseformat}**
  Has been merged into /sportsbookv2/betoffer/{eventId}.{responseformat} which now returns both live and prematch bet offers or use /sportsbookv2/betoffer/selected/{categoryGroupName}/event/{eventId}.{responseformat} with categoryGroupName as "live_event".

- **/sportsbook/betoffer/popular.{responseformat}**
  Most popular bet offers can be fetched using /sportsbookv2/betoffer/mostpopular/3way.{responseformat}. This resource returns country specific list of bet offers that contain the five most popular outcomes. local parameter decides country. The popular outcomes have the property popular with value true.

- **/sportsbook/event/live.{responseformat}**
  List of live and open events can be fetched using /sportsbookv2/event/live/open.{responseformat}

- **/sportsbook/betoffers/live.{responseformat}**
  Live betoffers for specific event group and evnt can be fetched using the resources /sportsbookv2/betoffer/group/{groupid}.{responseformat} and /sportsbookv2/betoffer/{eventId}.{responseFormat} respectively. Use exclusion tags to filter live bet offers.

- **/sportsbookv2/betoffer/search/{term}.{responseformat}**
  List view resource with filtering terms and attributes can be used to fetch betoffers.

- **/sportsbook/event/live/participant/{participantid}.{responseformat}**
  Use /sportsbookv2/betoffer/participant/{participantid}.{responseformat} to fetch both live and prematch betoffers for specified participant.

- ➤ **/sportsbook/participant/search.{responseformat}**
  This resource was removed.

- ➤ **/sportsbook/participant/group/{groupid}.{responseformat}**
  This resource was removed.

- ➤ **/sportsbook/participant/{participantid}.{responseformat}**
  This resource was removed.

- ➤ **/sportsbook/betoffer/live/participant/{participantid}.{responseformat}**
  Use /sportsbookv2/betoffer/participant/{participantid}.{responseformat} to fetch both live and prematch betoffers for specified participant.

- ➤ **/sportsbook/event/calendar.{responseformat}**
  This has been renamed to /sportsbookv2/event/livecalendar.{responseformat}.

- ➤ **/sportsbook/popularandlive/events.{responseformat}**
  Most popular bet offers can be fetched using /sportsbook/betoffer/mostpopular/3way.{responseformat}.

- ➤ List view resources has been added. Check List view resource section for more info.

Parameter changes

- The parameter path that was on some resources is now removed. Affected resources:
    - o /sportsbookv2/betoffer/event/{eventId}.{responseformat}
    - o /sportsbookv2/betoffer/participant/{participantId}.{responseformat}
- The parameter range_size now has a maximum value of 2 000 in all resources

Response field changes (General)

- The order of the fields within an object might have changed.
- All resources that returns bet offers and events, have the field with the list of bet offers named "betOffers"
  It was "betoffers" before.
- For lists which contains no values, now empty list is returned (in older version the fields where left out then)
    - event -> liveData -> liveStatistics,
    - betOffers -> prevOdds
    - betOffers -> eachWay -> tags
    - liveFeedUpdates (which is now actually liveData -> liveFeedUpdates)
    - tickers (which is now actually liveData -> tickers)
- All timestamps are returned in ISO8601 format, for example 2017-01-11T15:00:00Z.

Response fields (Event element)

- On event, the field boUri is removed from resources.
- On event, the field haiveBetOffers is renamed to offeredLive, since that is actually what it means.

- In events, the liveData object will always contains score (with empty away, home, and who=UNKNOWN). Previously it was omitted.
- Response from /event/livedata and /event/<id>/livedata resources are now wrapped in a response object containing a single liveData-field
- In events with mainBetOffer, the order field on criterion was earlier omitted when empty. Now the order field is always set (with one element in the list with the value '0').
- In participants on events, the fields nonRunner and scratched are now always supplied, even if they are false. Previously left-out.
- Several flags and states on Events and LiveData has moved to a list of tags.
  Note: Tags are not a fully defined set of values and new tags might appear without prior notice.

  The following fields on Event replaced by the specified tag:
  - offeredLive -> OFFERED_LIVE - The event will be offered live.
  - openForLiveBetting -> OPEN_FOR_LIVE - The event is open for live betting.
  - hasPrematchStatistics -> PREMATCH_STATS - Event has statistics.
  - hideStartNo -> SHOW_START_NUMBER - A hint for clients to show start number on participants (meaning of the old flag has been inverted). Mainly used in racing competitions.
  - americanDisplayFormat -> AMERICAN_DISPLAY_FORMAT - The event should be presented as "away @ home"
  - flag streamed and list streams have been been replaced with tags:
    - STREAMED_WEB - Event will be streamed to web (desktop) clients.
    - STREAMED_MOBILE - Event will be streamed to mobile clients.
  - displayType has been replaced with tags:
    - MATCH - The event is a match (usually between two participants)
    - COMPETITION - The event is a competition (usually leagues, races, tournaments etc)

  Two fields on LiveData are also moved to tags on Event:

  - visualizationSupported -> VISUALIZATION - Event will have live visualization.
  - openLive -> OPEN_FOR_LIVE (see above)

Response fields (Bet offer element)

- On bet offer the flag cashIn field is removed. Use cashOutStatus instead**.**
- On bet offer, for the element criterion, the field isDefault is removed.
- Several flags and states on bet offers have moved to a list of tags.
  The following fields on BetOffer replaced by the specified tag:
  - open -> field removed and no tag added. Please consider tags on Event in order to determine if the event is open for live
  - live -> OFFERED_LIVE - The bet offer will be offered live.
  - prematch -> OFFERED_PREMATCH - The bet offer will be offered prematch.
  - main -> MAIN - The bet offer is the main bet offer within the event.
  - combinable -> NOT_COMBINABLE - The bet offer can not be combined with other bet offers when placing bets. It tag is omitted the bet offer might be combined with other bet offers. Note that tag is negated compared to legacy api.
  - startingPrice -> STARTING_PRICE - The odds of the bet offer will be set during settling. The odds for this bet offer will be returned as -1.
  - pba -> PBA_DISABLED - Partial Bet Approval is not available for this bet offer. API no longer supplies a localized static description, instead it is up to the API consumer to decide text.

- rule4 -> RULE4 - Rule 4 applies to the bet offer. See the official terms and conditions for the description of Rule 4. API no longer supplies a localized static description, instead it is up to the API consumer to decide text.
- americanDisplayFormat -> AMERICAN_DISPLAY_FORMAT - The bet offer should be presented as "away @ home"
- mainLine -> MAIN_LINE - The odds of the outcome's for the bet offer are the most even within bet offer.
- For bet offer, previously outcome odds of magic 1 000, meant the outcome should be treated as suspended. Now instead the odds are no longer returned while the field status on the outcome is set to SUSPENDED. For SUSPENDED outcomes, the field odds might be returned if it has a real value.
- Bet offers for started racing events now have suspended set to true to show that they are not bettable.
